Bora-Care Earns “Green Approved Product” Certification from National Association of Home Builders (NAHB)

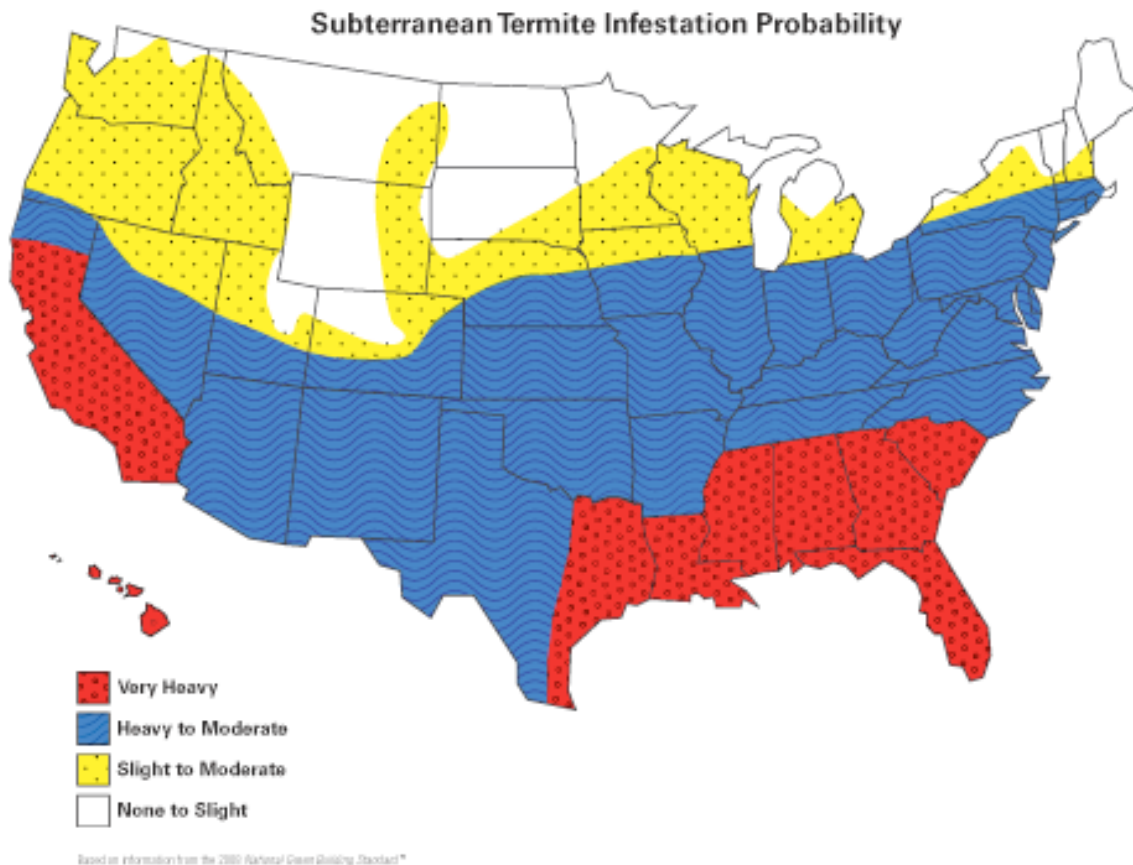

Bora-Care Termiticide, Insecticide and Fungicide has been designated as a “Green Approved Product” for new construction termite prevention by the National Green Building Certification program of NAHB.

While there a number of green building programs such as LEED® for Homes and Earthcraft® that already award ‘green points’ for Bora-Care applications, NAHB is now setting the standard. “The NAHB program is poised to become the leading residential program in the country and will likely consolidate many of the current state programs,” according to Sammy Baker, Builder Services Manager for Nisus Corporation. “Additionally, it will most likely be the foundation for future green building codes.”

Nisus received Certification #00027 from the NAHB Research Center and is now listed on the web site (<http://greenapprovedproducts.com>) as a Green Approved Product under NAHB Practice #602.8. Builders can earn the following points;

- 6 points for a whole house treatment in Very Heavy termite zones
- 4 points for applying a 3-foot band treatment in Moderate to Heavy zones
- 2 points for applying a 2-foot band in Slight to Moderate zones

NAHB only considers products that have extensive *product-specific* research and data for this designation.

Bora-Care is a borate-based EPA-registered termiticide manufactured by Nisus Corporation. During new construction, pest control companies apply it directly to wood, concrete and foundation penetrations to eliminate wood as a food source and to create a continuous barrier that termites cannot cross. Bora-Care's unique patented formula allows its active ingredient to penetrate into wood, delivering long-term residual protection. An added value is that treated wood is also protected against carpenter ants, wood destroying beetles and decay fungi.

For more information about Nisus Corporation's green products for wood preservation, sanitation, odor control and pest control, contact Nisus Corporation at 800-264-0870 or visit www.nisuscorp.com.
